Bibtex Entry Manager

Level 4 project 2010/2011

John Thow (Supervisor – Dr David Manlove)

Task List for Usability Evaluation

1. Create an account on the system. Use an anonymous, but valid email address: e.g. choose a random number and swap it for the `X' in evaluationX@bibtex.org

2. Log in to the system

3. Import 'File 1.bib' from the folder on the desktop (Desktop\Evaluation)

   ➤ The system will now be populated with some sample entries.

4. View a list of all entries in the system.

5. Sort the table by any of the table headers.

6. Delete any entry from the system.

7. Now undo the deletion of the entry from 6.

8. Import 'File 2.bib' from the folder on the desktop (Desktop\Evaluation)

   ➤ The system will now have duplicate items in it.

9. Eliminate some of the duplicates from the system.

10. Modify an entry in the system. Try to give the system invalid input. For example, specify a string of alphanumeric characters instead of digits in the 'year' field

11. Find an entry online (a suggested source is open in another browser to pick one from, but you are free to pick your own)

12. Import the raw text to the system & verify that the entry was imported correctly.

13. Please download the library of references that now exist in the system

Thank you! Please let me know that you are finished so I can give you a questionnaire to complete
